CONTENTS OF VOLUME 164

NUMBER 1, JULY 1987

A Differential Pulse Polarographic Serum Protein Assay	<i>W. Hertl</i>	1
Bacterial Adherence on Replicas of Sodium Dodecyl Sulfate-Polyacrylamide Gels	<i>Akapron Prakobphol, Patricia A. Murray, and Susan J. Fisher</i>	5
Reaction of Monoclonal Antibodies with Plasma Membrane Proteins after Binding on Nitrocellulose: Renaturation of Antigenic Sites and Reduction of Nonspecific Antibody Binding	<i>Horst-Walter Birk and Hermann Koepsell</i>	12
Preparative Isolation of a Reversible Protein-Protein Crosslink Generated in 50 S Subunits of <i>Escherichia coli</i> Ribosomes and Identification of Its Components	<i>Hans-Joachim Schönfeld and Kirani Foulaki</i>	23
Measurement of Cytochrome <i>f</i> in Thylakoids of Higher Plants Using Quantitative Gel Electrophoresis	<i>Peter J. Holloway, Donald J. Maclean, and Kenneth J. Scott</i>	31
A Sluicing Device for Reproducibly Measuring the Strength of Attachment of Cultured Cells to Their Substrate	<i>Nicholas P. B. Dudman, Christine Hicks, and David E. L. Wilcken</i>	35
Location and Purification of Enzymes on Polyacrylamide Gels Using Dialyzable Fluorescent Markers	<i>A. M. Bodhe, H. G. Vartak, M. V. Rele, and V. S. Dhamankar</i>	39
Electroporation: Parameters Affecting Transfer of DNA into Mammalian Cells	<i>Joyce C. Knutson and Daniel Yee</i>	44
Isolation of High-Molecular-Weight DNA from Eukaryotic Cells by Formamide Treatment and Dialysis	<i>J. J. Kupiec, M. L. Giron, D. Vilette, J. M. Jeltsch, and R. Emanoil-Ravir</i>	53
Construction of cDNA Libraries by Blunt-End Ligation: High-Frequency Cloning of Long cDNAs from Filamentous Fungi	<i>Tuula T. Teeri, Vijay Kumar, Päivi Lehtovaara, and Jonathan Knowles</i>	60
Spectropolarimetric Determination of the Guanine-Cytosine Content of DNA	<i>M. Maiti and R. Nandi</i>	68
Activity Staining of Cellulases in Polyacrylamide Gels Containing Mixed Linkage β -Glucans	<i>Wolfgang H. Schwarz, Karin Bronnenmeier, Folke Gräbnitz, and Walter L. Staudenbauer</i>	72
Detection of Biotinylated DNA Probes by Using Eu-Labeled Streptavidin and Time-Resolved Fluorometry	<i>Patrik Dahlén</i>	78
Purification of Alpha-Toxin from <i>Staphylococcus aureus</i> and Application to Cell Permeabilization	<i>Inge Lind, Gudrun Ahnert-Hilger, Georg Fuchs, and Manfred Gratzl</i>	84
Carboxypeptidase N: Colorimetric Assay Using a New Substrate	<i>Dirk Hendriks, Simon Scharpe, Marc van Sande, Marie-Paule Lommaert, and Yasushi Kasahara</i>	90
An Enzymatic Colorimetric Assay of Calcium-Dependent Phospholipases A	<i>Juha Kasurinen and Tapani Vanha-Perttula</i>	96
Resolution of the Enantiomers of Various α -Substituted Ornithine and Lysine Analogs by High-Performance Liquid Chromatography with Chiral Eluant and by Gas Chromatography on Chirasil-Val	<i>J. Wagner, C. Gaget, B. Heintzelmann, and E. Wolf</i>	102

Precolumn Extraction and Reversed-Phase High-Pressure Liquid Chromatography of Prostaglandins and Leukotrienes	<i>William S. Powell</i>	117
Kinetic Analysis of the Fluorescence Reaction of Histamine with Orthophthalaldehyde	<i>Teruki Yoshimura, Tohru Kaneuchi, Toshiaki Miura, and Michiya Kimura</i>	132
Fluorometric High-Performance Liquid Chromatography of <i>N</i> -Acetyl- and <i>N</i> -Glycylneuraminic Acids and Its Application to Their Microdetermination in Human and Animal Sera, Glycoproteins, and Glycolipids	<i>Shuuji Hara, Yasuyo Takemori, Masatoshi Yamaguchi, Masaru Nakamura, and Yosuke Ohkura</i>	138
Detection of a Few Picograms of DNA on Polyacrylamide Gels by Silver Staining	<i>Bodil Lomholt and Sune Frederiksen</i>	146
Polyacrylamide Gel Electrophoresis of Several Proteins in the Presence of Sodium Oligooxyethylene Dodecyl Ether Sulfates or a Commercially Available Analog	<i>Misao Koide, Masahiro Fukuda, Kazuo Ohbu, Yasushi Watanabe, Yutaro Hayashi, and Toshio Takagi</i>	150
Tandem Mass Spectrometric Determination of 11-Dehydrothromboxane B ₂ , an Index Metabolite of Thromboxane B ₂ in Plasma and Urine	<i>Horst Schweer, Claus O. Meese, Otto Fürst, P. Gönne Kühl, and Hannsjörg W. Seyberth</i>	156
Determination of Trace Amounts of 5-Methylcytosine in DNA by Reverse-Phase High-Performance Liquid Chromatography	<i>Chandrashekhar V. Patel and K. P. Gopinathan</i>	164
A Miniaturized Method for Multiple and Inexpensive Electrophoreses on Polyacrylamide Slab Gels	<i>Yasuyuki Yamada</i>	170
Fast Method for Two-Dimensional Electrophoresis of Proteins from Biological Samples	<i>Joachim Das and Hans-Jürgen Baese</i>	175
Measurement of the Susceptibility of Paramagnetically Labeled Cells with Paramagnetic Solutions	<i>Anthony P. Russell, Christopher H. Evans, and Vernon C. Westcott</i>	181
Homogeneous Chicken Heart Mitochondrial Creatine Kinase Purified by Dye-Ligand and Transition-State Analog-Affinity Chromatography	<i>S. P. J. Brooks, Vickie D. Bennett, and C. H. Suelter</i>	190
A Continuous Spectrophotometric Assay for the <i>Bacillus cereus</i> Phospholipase C Using a Thiophosphate Substrate Analog: Evaluation of Assay Conditions and Chromogenic Agents	<i>William R. Snyder</i>	199
Methods for DNA Extraction from <i>Candida albicans</i>	<i>Pati M. Glee, Peter J. Russell, Jo Anne Welsch, Joanne C. Pratt, and Jim E. Cutler</i>	207
Analysis of Tyrosine Kinase Activity in Cell Extracts Using Nondenaturing Polyacrylamide Gel Electrophoresis	<i>Robert I. Glazer, Gang Yu, and Marian C. Knode</i>	214
The Identification of Serum Tuftsin by Reverse-Phase High-Performance Liquid Chromatography and Mass Spectrometry	<i>John O. Naim, Dominic M. Desiderio, Joann Trimble, and J. Raymond Hinshaw</i>	221
Quantitation of Genes and Transcripts by Saturation Hybridization in Urea Solutions Using Strand-Selected Probes	<i>F. Lee Dutton and Arthur Chovnick</i>	227
Quantitating Small Volumes of Dilute DNA Samples Containing Sodium Dodecyl Sulfate	<i>William Lloyd Perry III and Karl Sirotkin</i>	236
A New Technique for Highly Sensitive Detection of Superoxide Dismutase Activity by Chemiluminescence	<i>Philippe Corbisier, Andree Houbion, and Jose Remacle</i>	240
Synthesis of Fluorescent Peptidyl Thioneamides and the Assay of Papain in the Presence of Trypsin	<i>Kyujin Cho</i>	248

Linear Multidimensional Liquid Chromatography in the Preparative Scale Purification of Calmodulin from Brain Extract	Steven A. Berkowitz	254
Analysis of Polyamines as Their Dabsyl Derivatives by Reversed-Phase High-Performance Liquid Chromatography	Pertti Koski, Ilkka M. Helander, Matti Sarvas, and Martti Vaara	261
Column Purification of Adenovirus Cores	J. F. Cupo, L. J. Rezanka, and J. A. Harpst	267

NUMBER 2, AUGUST 1, 1987

Review. Current Methods for <i>Saccharomyces cerevisiae</i> . I. Growth	Sanford J. Silverman	271
Review. Current Methods for <i>Saccharomyces cerevisiae</i> . II. Sporulation	Zofia Olempska-Beer	278
Measurement of Branched-Chain Ketoacids in Plasma by High-Performance Liquid Chromatography	Mackenzie Walser, Louis M. Swain, and Valerie Alexander	287
Elimination of CoASH Interference from Acetyl-CoA Cycling Assay by Maleic Anhydride	Andrzej Szutowicz and Hanna Bielarczyk	292
An Azophenolic Colorimetric Reagent for Use in Enzyme-Linked Immunosorbent Assays	Ralf G. Dietzgen, Roy E. Snoke, and Bruce Babb	297
Fluorescent Staining of Proteins Transferred to Nitrocellulose Allowing for Subsequent Probing with Antisera	Boguslaw Szewczyk and Donald F. Summers	303
Acid-Labile Sulfide and Zero-Valence Sulfur in Plant Extracts Containing Chlorophyll and Ionic Detergents	Peter Bordier Høj and Birger Lindberg Møller	307
Reversed-Phase and Hydrophobic-Interaction High-Performance Liquid Chromatography of Elapid Cardiotoxins	Gernot Osthoff, Abraham I. Louw, and Leon Visser	315
A Highly Efficient Procedure for the Quantitative Formation of Intact and Viable Lysozyme Spheroplasts from <i>Escherichia coli</i>	Hans J. P. Marvin and Bernard Witholt	320
Method for Exchange of the Lipid Environment of the Membrane-Bound (Mg ²⁺ + Na ⁺)-ATPase of <i>Acholeplasma laidlawii</i> B	David C. Jinks and Ronald N. McElhaney	331
Introduction of 5'-Terminal Functional Groups into Synthetic Oligonucleotides for Selective Immobilization	Rainer Bischoff, James M. Coull, and Fred E. Regnier	336
A Radiometric Assay for Phenylethanolamine <i>N</i> -Methyltransferase and Catechol <i>O</i> -Methyltransferase in a Single Tissue Sample: Application to Rat Hypothalamic Nuclei, Pineal Gland, and Heart	Juraj Culman, Tichomir Torda, and Virginia K. Weise	345
Radiometric Assay for Cytochrome <i>P</i> -450-Catalyzed Progesterone 16 α -Hydroxylation and Determination of an Apparent Isotope Effect	Yoichi Osawa and Minor J. Coon	355
Oxidation Product(s) in Acetaldehyde Reacts with NAD(P)H and Interferes with Assay of Alcohol Dehydrogenase	Run-Tao Yan, Chang-Xi Zhu, and Jiann-Shin Chen	362
Spectrophotometric Determination of Oxidized and Reduced Pyridine Nucleotides in Erythrocytes Using a Single Extraction Procedure	Charles R. Zerez, Sandra J. Lee, and Kouichi R. Tanaka	367

Systematic Fractionation of Oligosaccharides of Human Immunoglobulin G by Serial Affinity Chromatography on Immobilized Lectin Columns <i>Hiroshi Harada, Masugu Kamei, Yuko Tokumoto, Seiko Yui, Fumihiko Koyama, Naohisa Kochibe, Tamao Endo, and Akira Kobata</i>	374
Isolation of Highly Purified Rat Liver Lysosomal Membranes Using Two Percoll Gradients <i>Linda J. Symons and Adam J. Jonas</i>	382
An Enzyme Immunoassay for the Quantitation of Dihydropteridine Reductase <i>Sau-Wah Kwan, Rong-sen Shen, and Creed W. Abell</i>	391
A New Colorimetric Method for Determination of Creatine Phosphokinase <i>Mahmoud Aminlari and Taleb Vaseghi</i>	397
Crosslinked Concanavalin A-O-(Diethylaminoethyl)-Cellulose—An Affinity Medium for Concanavalin A-Interacting Glycoproteins <i>Alka Kamra and Munishwar N. Gupta</i>	405
A Coupled Optical Assay for Adenine Phosphoribosyltransferase and Its Extension for the Spectrophotometric and Radioenzymatic Determination of 5-Phosphoribosyl-1-pyrophosphate in Mixtures and in Tissue Extracts <i>Pier Luigi Ipata, Umberto Mura, Marcella Camici, and Maria Piera Giovannitti</i>	411
Enzymatic Determination of Pyrroloquinoline Quinone Using Crude Membranes from <i>Escherichia coli</i> <i>Otto Geiger and Helmut Görsch</i>	418
A New Tritium-Release Assay for 25-Hydroxyvitamin D-1 α -Hydroxylase <i>Alex J. Brown, Kato Perlman, Heinrich K. Schnoes, and Hector F. DeLuca</i>	424
Quantification of Proteins in the Low Nanogram Range by Staining with the Colloidal Gold Stain AuroDye <i>John B. Hunter and Susan M. Hunter</i>	430
A Reverse-Phase High-Performance Liquid Chromatography Assay for Dihydroxyacid Dehydratase <i>Elzbieta M. Smyk-Randall and Olen R. Brown</i>	434
Sample Preparation for Gas Chromatography with Electron Capture Detection: Determination of Total and Free Thyroxin in Serum <i>Eugene J. Rogers and Roger W. Giese</i>	439
Synthesis and Structure Determination of [8- ¹³ C]Guanosine 5'-Diphosphate <i>Martin Poe, John I. Germershausen, and Malcolm MacCoss</i>	450
High-Performance Analytical Applications of Immobilized Metal Ion Affinity Chromatography <i>Makonnen Belew, Tai Tung Yip, Lennart Andersson, and Rolf Ehrnström</i>	457
Fluorescence-Detected Circular Dichroism Studies of Serum Albumins <i>Mark P. Thomas, G. Patonay, and I. M. Warner</i>	466
Isolation of an Integral Membrane Glycoprotein by Chloroform-Methanol Extraction and C ₃ -Reversed-Phase High-Performance Liquid Chromatography <i>Kurt R. Brunden, Carole T. Berg, and Joseph F. Poduslo</i>	474
An Enzymatic Method for the Assay of Serum Argininosuccinate Lyase <i>Toshiaki Miura, Megumi Kashiwamura, and Michiya Kimura</i>	482
Analysis of Lectin Binding by <i>Bradyrhizobium japonicum</i> Strains Grown on Nitrocellulose Filters Using Peroxidase-Labeled Lectin <i>Rongti Liang and David W. Emerich</i>	488
A Water-Soluble, Monitorable Peptide and Protein Crosslinking Agent <i>Lois Aldwin and Danute E. Nitecki</i>	494
Immunoaffinity Purification of Membrane Protein Constituents of the IM-9 Lymphoblast Receptor for Substance P <i>Joseph P. McGillis, Michele L. Organist, and Donald G. Payan</i>	502

Colorimetric-Detected DNA Sequencing	<i>Stephan Beck</i>	514
Use of the Enzyme-Linked Immunoabsorbent Assay to Monitor the Purification of Glycosphingolipid Antigens by High-Performance Liquid Chromatography	<i>Joanne Buehler, Uri Galili, and Bruce A. Macher</i>	521
An Activity Stain for Dihydroxy-acid Dehydratase	<i>Che Fu Kuo, Tadahiko Mashino, and Irwin Fridovich</i>	526
Decoloration and Solubilization of Plant Tissue prior to Determination of ^3H , ^{14}C , and ^{35}S by Liquid Scintillation	<i>Ivan K. Smith and A. Lee Lang</i>	531
A Kinetic, Chromatographic Method for Studying Protein Hydrodynamic Behavior	<i>Larry A. Larew and Rodney R. Walters</i>	537
Analysis of Glycated Amino Acids by High-Performance Liquid Chromatography of Phenylthiocarbamyl Derivatives	<i>Donald J. Walton and John D. McPherson</i>	547
Methods for <i>in Situ</i> Visualization and Assay of Sulfurtransferases	<i>Bruce A. Aird, John Lane, and John Westley</i>	554
Separation by High-Performance Liquid Chromatography of Penicillins with C_4 to C_{10} Aliphatic Side Chains	<i>José M. Luengo and Miguel A. Moreno</i>	559
Isolation and Characterization of Different Molecular and Chromatographic Forms of Heparin-Binding Growth Factor 1 from Bovine Brain	<i>Wallace L. McKeehan and John W. Crabb</i>	563
ERRATA		
Volume 162, Number 2, May 1, 1987: David M. Mueller and Godfrey S. Getz, "Direct Determination of the Specific Activity of RNA Uniformly Labeled with ^{32}P ," pp. 521-528		570

AUTHOR INDEX FOR VOLUME 164		571
The Subject Index for Volume 164 will appear in the December 1987 issue as part of a cumulative index for the year 1987.		

INFORMATION FOR AUTHORS

Analytical Biochemistry is an international journal that publishes original articles on methods and methodology of interest to the biological sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

- Cell biology and cell, tissue, and organ culture methods that are of general application.
- Membranes and membrane proteins. These methods form a major section of interest.
- Procedures of interest in the field of molecular genetics including those necessary for cloning, sequencing, and synthesis of nucleic acids and for mutagenesis.
- Purification methods for enzymes and other proteins which contain a major novel aspect and in which a high level of purity is achieved. Acceptance for publication is based on the contribution made toward protein purification and not on the successful purification of a specific protein.
- Immunological techniques both analytical and preparative, if they are of general applicability by biochemists. Immunoassays are included but only if a unique approach is introduced rather than the determination of a substance not previously assayable.
- Pharmacological and toxicological research techniques that offer a biochemical approach.
- Review articles dealing with timely topics. Although these are generally invited, unsolicited outlines or manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to *Analytical Biochemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101. In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

An extended Information for Authors is published in each July issue. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about $8\frac{1}{2} \times 11$ inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 55 letters and spaces), an abstract (250 words), and the address to which proof should be mailed. In creating a title for your paper, please omit words such as *novel*, *rapid*, *improved*, *simple*, *sensitive*, *efficient*, *convenient*, *new*. Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. For example, what *kind* of method are you describing? Abbreviations should not be used in the article title or running title.

Please number all pages of the manuscript.

Authors should indicate the following on the title page: (1) the appropriate subject category for listing in the Table of Contents; (2) six descriptive key words for computer-aided selection of reviewers. (Please see the Appendix at the end of the extended Instructions to Authors published in the July 1, 1986 issue for a list of recommended key words.) These words will also be used in the preparation of the annual cumulative subject index for the journal.

Text. The suggested organization of an article is: abstract; introductory statement; Materials and Methods; Results; Discussion; Acknowledgments; References. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC-IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Instructions for Authors, appearing in the July issue of this journal.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be

described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text: each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for photoreproduction. A convenient size for drawings is $8\frac{1}{2} \times 11$ in. (21×27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final reproduction should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum. All photographs should be submitted as single glossy prints with strong contrasts and not mounted on cardboard; the magnification should be indicated by a scale where possible.

Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. Each table should have a short explanatory title.

Footnotes should be designated in text by superscript numbers and typed on a separate sheet. Footnotes to tables should be identified with lowercase italic superscript letters and placed at the bottom of the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in *Chemical Abstracts Service Source Index*, 1985. Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Jackson, G. E. D., and Young, N. M. (1987) *Anal. Biochem.* **162**, 251–256.
2. Bovey, F. A., and Jelinski, L. W. (1983) Chain Structure and Conformation of Macromolecules, p. 150, Academic Press, New York.
3. Britton, G. (1985) in *Methods in Enzymology* (Law, J. H., and Rilling, H. C., Eds.), Vol. 111, pp. 113–149, Academic Press, Orlando, FL.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.
